

Niagara Adult Day Service Integrated Programs

Integrated ADS Programs are intended for older adults who may be frail and cannot participate in community based recreational programs. Adults who attend Integrated Programs may be socially isolated, or may need personal care support due to a long-term chronic condition such as stroke, Parkinson's Disease, diabetes, and/or early to moderate stages of dementia. Participants should be able to tolerate a group setting, be medically stable, and be able to transfer independently or with one person assisting.

Programs provide social, recreational, cognitive and physical activities in a structured and supervised setting. Services include a meal, refreshments, medication reminders, personal care assistance and group activities. Special health diets can be accommodated (i.e. diabetic, low sodium). All programs offer a senior based daily exercise program designed to promote physical well-being and optimize health. Refer to the chart below for additional services offered at each site. Financial assistance with the Program fee may be available to individuals who qualify. ADS Programs will facilitate transportation services through an outside provider as available; however, self-transportation is encouraged for those who can't manage an extended period on a bus.
